WHAT IS SBHC

School-Based Health Centers are operated as a partnership between the school and community health organization, such as a community health center, hospital, or local health department.

Students are treated for acute illnesses, such as flu, and chronic conditions, including asthma and diabetes. They are also screened for dental, vision and hearing problems. With an emphasis on prevention, early intervention and risk reduction, GACFHC's school-based health centers counsel students on healthy habits and how to prevent injury, violence and other threats.
